Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 72-82, 88 and 90 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang in view of Matsushima et al. and Prood

There is disclosed in Wang a rotisserie oven for cooking food, comprising: an enclosure 1 having a roof 5a, a wall 5 and a curved section extending from the wall to the roof; a heating element 12, 27 inside the enclosure; means 17, 25 for rotating the food about a horizontal axis and by the heating element (see figure 4); and a vent (see figures 2, 6) located in the curved section.

There is disclosed in Matsushima an oven for cooking food, comprising: an enclosure 1 that includes walls; a heating element 5, 6 inside the enclosure; means 25, 26 for rotating the food by the heating element; and a plurality of vents (louvers) 22a, 22b, 38a, 38b located in one of the walls or the enclosure, the vents having an indent extending into the enclosure with an opening at the top of the indent.

There is disclosed in Prood a spit assembly (C) comprising plural plates 9, each having a center and rods 7, 8, wherein the spit assembly does not include any structure extending from the center of one plate and connecting to the center of any other plate.

Art Unit: 1761

It would have been obvious to one skilled in the art to modify the vents of Wang with that taught by Matsushima, in order to improve the efficiency of the vents and prevent damage to structure holding the oven. Additionally, it would have been obvious to one skilled in the art to substitute the horizontal food support of Wang with that disclosed in Prood, in order to allow support of more food items in the enclosure.

In regards to claims 74 and 76, the movement of air within the oven enclosure is seen as a method step and fails to describe any structural arrangement.
